SUMMARY

QA Engineer with over 3 years of experience testing web and mobile applications, mostly in fintech. Works across both manual and automation testing: builds and maintains Playwright test suites in TypeScript, runs functional, regression, integration and exploratory testing, and covers API testing in Postman along with SQL checks against the database. Comfortable with the full SDLC and STLC, from test planning through to defect closure, in an Agile team.

TECHNICAL SKILLS

Automation Testing: Playwright (TypeScript, JavaScript), Playwright Test Agents (Planner, Generator, Healer), Appium, WebdriverIO, Page Object Model, cross-browser and parallel execution

Manual Testing: Functional testing, Regression testing, Integration testing, Exploratory testing, Smoke and Sanity testing, UAT, Mobile testing (Android and iOS)

API Testing: Postman, REST API testing, collections and environments, status code and response schema validation, negative and boundary testing

Database Testing: SQL, joins, aggregations, subqueries, backend data validation, MySQL, SQL Server

Test Management: TestRail (test case creation, test suites, test runs and maintenance), test plans, test scenarios, requirement traceability, Jira, defect lifecycle

Other Tools: Git, GitHub, GitHub Actions, Chrome DevTools

Methodologies: SDLC, STLC, Agile, Scrum, QA methodologies and best practices

PROFESSIONAL EXPERIENCE

SQA Engineer

ACE Money Transfer (United Kingdom), Kharian, Pakistan
Feb 2024 - Present

- Built and maintain the Playwright automation framework in TypeScript for the ACE Money Transfer web portal. It now covers around 250 test cases across sign-up, login, KYC document upload, beneficiary management, transaction creation and payment.
- Automated about 70% of the critical regression suite, which brought a full regression cycle down from roughly 3 days of manual work to under an hour, and made it practical to run on every release candidate.
- Use Playwright Test Agents in day to day test writing: the Planner agent to explore flows and draft a test plan, the Generator agent to turn the approved plan into spec files, and the Healer agent to repair tests that break after UI changes. Every plan, spec and fix is reviewed before it is merged.
- Set the framework up on the Page Object Model with shared fixtures, per-environment configuration, and API calls for test data setup and cleanup. Reports, traces, screenshots and videos come out of CI, so most failures are diagnosed without reproducing them by hand.
- Run cross-browser and responsive checks on Chromium, Firefox and WebKit ahead of each release, supporting more than 20 production releases on a two week sprint cycle.
- Test around 60 API endpoints in Postman for transactions, exchange rates and KYC, covering status codes, response schemas, authentication and negative cases, then verify the results with SQL queries against the customer and transaction tables.
- Handle QA for Yonna Wallet across the mobile app, Agent Portal and Back Office, taking releases through functional, regression and end to end testing to UAT sign-off and production deployment readiness.
- Started mobile automation for the Yonna Wallet Android and iOS app using Appium with WebdriverIO, setting up the project structure, device configuration and a first smoke suite for login, wallet balance, top-up and transfer.
- Work with the Compliance team on KYC and sanctions screening: document verification for over 100 countries, customer risk profiling, transaction limits, and hold and release rules.
- Tested the customer chatbot on account, transaction, exchange rate and corridor queries, checking answer accuracy, fallback behaviour and conversation flow before launch.

- Maintain over 800 test cases in TestRail, organised into suites and test runs for each release, and have logged and verified more than 400 defects in Jira with developers and business analysts.

Associate SQA Engineer
FusionWave (Pvt.) Limited, Lahore, Pakistan
Feb 2023 - Jan 2024

- Tested mobile and web applications alongside senior QA engineers, covering functional, regression and integration testing.
- Wrote and maintained test cases and test scenarios, and followed defects through to closure.
- Caught issues early in the development cycle, which helped keep releases on schedule.

SQA Intern
1011 Technologies, Rawalpindi, Pakistan
Oct 2022 - Dec 2022

- Tested mobile and web applications under the guidance of senior QA engineers.
- Helped with test planning, test execution and defect tracking across the QA lifecycle.

PROJECTS

- **ACE Money Transfer web portal automation (Playwright).** Own the Playwright and TypeScript regression suite for the customer web portal, automating the full remittance journey: sign-up, KYC verification, beneficiary setup, rate selection, transaction creation and payment confirmation, with API-driven test data and CI execution.
- **ACE Money Transfer app, web portal and back office.** Tested the mobile app, web portal and back office for functionality, usability and reliability across international remittance corridors.
- **KYC system.** Tested the ACE KYC system for more than 100 countries, covering ID cards, EU national IDs, passports, resident permits and driving licences, and checking that scanned documents populated user details correctly.
- **Yonna Wallet.** Handled QA across the mobile app, Agent Portal and Back Office, configuring agents, companies and rates, and running functional, regression and end to end cycles up to UAT sign-off and production readiness. Also set up the first Appium and WebdriverIO mobile smoke suite.
- **Compliance and sanctions screening.** Validated compliance workflows with the Compliance team, including sanctions and watchlist screening, customer risk profiling, transaction limits, and hold and release handling.
- **AI chatbot.** Tested the ACE Money Transfer chatbot on account, service, transaction, rate and corridor queries, checking response accuracy and fallback handling.
- **HRMS system.** Tested an HRMS platform covering employee records, payroll, leave management, announcements, company policies, forms, reports and inventory.
- **Other projects.** Citizen Society website, Dring Delivery (app, web and admin panel), Decider social app, Parcel Delivery Management app, Hoyzee food ordering platform, Rural Response alerts app and an online lottery app, across e-commerce, logistics, social and public service domains.

EDUCATION

BS Software Engineering
International Islamic University, Islamabad
2018 - 2022
